

# Grain Ounce Equivalents for Grades K-12 in the National School Lunch Program and School Breakfast Program

## School Year 2021-22

The U.S. Department of Agriculture's (USDA) [Exhibit A: Grain Requirements for Child Nutrition Programs](#), summarizes the ounce equivalents (oz eq) for nine groups (A-I) of grain foods. The chart in this document lists the Exhibit A oz eq that apply to the meal patterns for grades K-12 in the National School Lunch Program (NSLP), School Breakfast Program (SBP), and Seamless Summer Option (SSO) of the NSLP.

**All grains offered in the NSLP and SBP must be whole grain-rich (WGR).** For information on the WGR criteria, refer to the CSDE's guide, [Meeting the Whole Grain-rich Requirement for the NSLP and SBP Meal Patterns for Grades K-12](#). For information on the grains component and meal pattern requirements for grades K-12, refer to the CSDE's [Menu Planning Guide for School Meals for Grades K-12](#).

**Note:** Per USDA memo, [COVID-19: Child Nutrition Response #90: Nationwide Waiver to Allow Specific School Meal Pattern Flexibility for School Year 2021-2022](#), school food authorities (SFAs) that cannot meet the WGR requirement during school year 2021-22 (through June 30, 2022) must request a waiver from the CSDE. For more information, visit the "[How To](#)" section of the CSDE's Operating Child Nutrition Programs during COVID-19 Outbreaks webpage.

The amount of a creditable grain food that provides 1 oz eq varies because different types of foods contain different amounts of creditable grains. For example, to credit as 1 oz eq of the grains component, a WGR roll must weigh 28 grams (1 ounce) and a WGR blueberry muffin must weigh 55 grams (2 ounces). The minimum amount that credits toward the grains component is  $\frac{1}{4}$  oz eq.

### Grain-based desserts

Grain-based desserts (such as cookies, cakes, and cereal bars) in groups C-G are designated with the footnote 1 (allowed for lunch and breakfast) or 2 (allowed only for lunch). The total amount of grain-based desserts at lunch cannot exceed 2 oz eq per week.

### Using the ounce equivalents chart

This chart determines the required quantity for commercial grain products and may also be used for recipes if the menu planner knows the **weight** of the prepared (cooked) serving. If the recipe does not provide this information, the average weight per serving can be determined by weighing several servings of the recipe (refer to the CSDE's [Yield Study Data Form for Child Nutrition Programs](#)). For guidance on determining the oz eq contribution of a grain product or recipe, refer to the CSDE's resource, [Calculation Methods for Grain Ounce Equivalents for Grades K-12 in the NSLP and SBP](#).
